I am just beginning to approach the Internet and there is no doubt that this hugely expanding dimension of information-spreading will entwine us all before long. The blurb promises that contact with the Net will involve exposure to 'jargon that's absolutely impossible to understand' and you can see its point. Brennan does a good job in avoiding unexplained netspeak and has designed a book which can either be read end to end or 'surfed' net style. The chapters are called 'sites'. Hence it functions both as introduction and indulgence depending on where you are coming from. Being at the moment still non-net, I can only observe the thoroughness and steadiness of Brennan's presentation which does not patronise or discourage 'technophobes', for whom this provides a recommendable introduction.
